

CSS Studio — Pitch Deck Outline (10–12 slides)

Design notes: dark cinematic theme, one idea per slide, lead with the live product.

Each slide below = title + the 1–3 lines that go on it + speaker note.

Slide 1 — Hook

CSS Studio — open the app, a music video plays. With sound. Instantly.

- (Background: a 10-second autoplaying MV loop, audible.)
- *Note*: don't explain — let it play 5 seconds, then talk.

Slide 2 — The problem

AI media is split in half. Nobody owns the whole experience.

- Suno/Udio: music, no video. · Sora/Kling: video, no sound, no song.
- Audiences get *files to download*, not a place to *enjoy*.

Slide 3 — The insight (the moat)

Never burn the layers together.

- Lyrics + audio + video kept as separate layers → any work is infinitely re-voiceable and re-languageable. Burned-in output (everyone else) can't do this.

Slide 4 — The product

Zero-friction watch. In-cinema create.

- Open → audible full-screen MV feed. Type one line → it generates and plays in the *same* panel.
- Multi-language / multi-voice on every work, one tap.

Slide 5 — Why now

Generation got cheap; the destination layer is empty.

- Everyone's building tools; no one owns AI-video-with-sound *consumption + distribution*.

Slide 6 — Market & roadmap

MV today → the long-form ladder.

- MV → short-drama (微短剧, multi-billion proven) → series → multi-thread 3D film.
- Same layered pipeline scales up each rung. TAM grows with each step.

Slide 7 — Business model

Multiple revenue surfaces, already wired.

- Credits/generation · paid background queue · in-panel works marketplace · per-work "add a language" upsell · subscription. Future: ad-tier + creator rev-share + IP licensing.

Slide 8 — Status & early signal (*be honest*)

Product-complete, pre-launch.

- Built: 2,153 works · 1,270 audio stems · 1,534 language tracks · 66.7k frames · self-healing infra.
- Early commerce signal: 66 payment intents / 29 paid orders — pre-marketing.
- The raise funds: launch + first real users + retention proof.

Slide 9 — Moat

Layered pipeline + civilization-aware generation + in-cinema retention loop.

- Hard to copy: it's an architecture choice + a consumption surface, not a model.

Slide 10 — Team

Founder who ships. (Jing — fill bio: what you've built solo, speed, domain insight.)

- *Note:* at pre-seed, investors bet on the founder. Make this concrete.

Slide 11 — The ask

Raising \$0.5–1.5M pre-seed (SAFE).

- 18 months runway → launch, prove D1/D7/D30 retention, ship one long-form format.
- Non-dilutive first: \$100–350k cloud/model credits + accelerator.

Slide 12 — Vision

The home for AI cinema — where the world watches, creates, and trades stories in every language.

- (Close on the live app again.)

How to build it fast

- Keynote/Google Slides, dark template. Drop a screen-recording of the live app on slides 1, 4, 12.
- Keep speaker notes off-slide. 3–4 minutes total. The demo is the deck.
